The overall quality of teaching by this Instructor was:	4.80	0.48	61
Comments: Please provide explanation if desired.			
A little hard to understand at times, but nonetheless a great sense of humor and great teacher			
Amazing Instructor I learned the most in this block from him			
An amazing teacher. Thanks for the hard work.			
Awesome instructor. One of the best.			
Awesome pathologist lecturer - knows his stuff and teaches well			
Dr. Zheng has been the best pathology lecturer I have had so far, as he takes the most important concepts and teaches them in a way that is understandable. I believe this helps us to remember these concepts well for our future.			
Dr. Zheng is a fantastic professor! He should have to opportunity to teach more pathology lectures. I learn a lot from his lectures.			
Dr. Zheng is a great professor. He presents complicated pathology in such a simple and logical manner that it makes it really easy to understand. You can tell by his teaching style that he really wants students to excel. All of us really appreciate the pathology reviews that he put together. My only complaint is that he hasn't lectured us in any other block!			
Dr. Zheng is amazing in providing practice materials in lecture review format and encouraged students to ask a lot of questions.			
Dr. Zheng is wonderfully organized, provides great clinical insight, but most importantly, he encourages student participation--if all professors really stressed understanding like he does we would have a much deeper understanding of the material. He should play a greater role in the life cycle block.			
Dr. Zheng obviously loves to teach. He is great at explaining the details and giving the big picture to us.			
Dr. Zheng was very knowledgeable and helpful, good lectures and the review sessions are great. I wish every pathology lecturer gave review sessions.			
Dr. Zheng's presentations and lecture materials were very clear and easy to follow. He explained the gross specimens and the means of differentiating between them in an understandable manner.			
Excellent job, one of the highlights of the block and never has pathology been as exciting.			
Excellent teaching! Dr. Zheng was clear and complete. I hope he teaches us again.			
great lectures, great reviews, great exam questions.			
Great powerpoint review.			
His labs were the most helpful path labs we've had.			
I felt that Dr. Zheng's notes were clear and that he made his expectations known.			
Its always great to have a teacher who actually cares if we learn the material. He is a great motivator and extremely helpful. Keep him around.			
One of the best			
One of the best path lecturers. I also really liked his organized review sessions. They really enabled me to judge what I already knew and what I still needed to cover.			
One of the best path professors we have had to date. His notes were succinct and informative, his lectures and slides were coherent and organized, and he has a sense of humor! I enjoyed path a lot this block!			
Thank you			
Thank you for all your hard work. Your teaching is very organized, the important points are stressed, and your lectures are enjoyable. Also, your reviews are outstanding and very helpful. Thanks again.			

Thank you for teaching pathology. I appreciate the integration of current research of pathology with current clinical treatment.

Thank you for your lecture format of reviews. These are the best reviews so far in med school.

Thank you so much for doing the reviews for us and allowing us access to them for review

thanks for the wonderful power points

very clear on what he wanted us to understand - really helped quiz us in labs and specified what we should focus on which was helpful

very good lectures and useful notes. made it clear what he wanted us to learn and know for the exams.

You are a wonderful teacher. Keep up the great work!

You obviously love teaching and do a good job preparing students for what you think we should know and what we will be tested on. I think that you have the best lecture notes of all the pathologists we have been taught by so far because you don't use the bullet point method but instead explain pathological processes in complete sentences, I found this very helpful and only wish all of your colleagues would do the same. You also do a nice job of explaining problem areas in pathology for students.

Your teaching excellence is only overshadowed by your ping pong prowess.

your willingness to help students is beyond my expectation . you put a lot of time and effort to help students understand concepts. you're willing and eager to answer questions..... as a professor you're an icon
